Abstract of EP0852971

The system consists of a distribution unit (21) which holds one or more chlorine tablets (34) and a number of sponges (29). The unit is connected to a pressurised water conduit (19) and has two outlets (23,26) connected respectively to a compartment containing the sponges and a flow control valve and to the chlorine tablet compartment and the flow control valve respectively. The distribution unit is connected by the pressurised water conduit and a pump to a water tank, while the outlet pipe is connected via an electromagnetic valve (35) and a branch pipe to a rinsing head.
